1. Introduction

1.1 About Enabel

Enabel, the Belgian development agency, is an agency of the Belgian government. The agency executes the Belgian governmental cooperation projects as well as projects funded by other donors such as the European Union. In Tanzania, Enabel primarily implements projects in the domains of agriculture, water, and sanitation. One of the flagship projects for Enabel is the Beekeeping Value Chain Support project. This project is funded by the European Union Delegation in Tanzania and is covering the island of Pemba as well as the mainland regions of Katavi, Kigoma, Tabora, Shinyanga and Singida.

1.2 Project Background

The beekeeping value chain has many constraints which are, among others, related to limited capacity of value chain actors and their poor coordination, weak performance of value chain service providers and the lack of an adequate enabling environment. The institutional capacity for demand-driven research and quality assurance needs further strengthening. The Ministry of Natural Resources and Tourism (MNRT), responsible for the development of the beekeeping sector, considers that the lack of adequate and appropriate processing and storage facilities, together with other constraints that restrict the marketing of honey, is one of the factors that hinder beekeeping sector development.

Within this context, the EU, under the 11th EDF National Indicative Programme for Tanzania, is financing the Action to support beekeeping sector to enhance its contribution to inclusive economic growth in Tanzania. The action, hereafter referred to as the Beekeeping Value Chain Support project, will improve the beekeeping value chain through enhanced quality production, value addition of bee products and strengthen trade and market access to local, regional, and international markets.

The intervention area for the Action covers the mainland regions of Tabora, Kigoma, Katavi, Singida, Shinyanga, and the whole of Pemba Island.

- Effective knowledge management.

For expected output 2 the project seeks to achieve the following sub-outputs:
